1) List of all bugs reported at different changes in the lifecycle

The screenshot shows the 'BTB50 board' in Jira, displaying a Kanban view of bugs. The board is organized into four columns: 'TO DO' (3 items), 'IN PROGRESS' (2 items), 'IN REVIEW' (1 item), and 'DONE'. Each bug card includes a title, a description, a status icon, and a version number (BTB50-1 to BTB50-6). The 'TO DO' column contains three bugs: 'PII Leak: Sensitive SSN and Credit Card numbers stored in cleartext' (BTB50-1), 'Integrity Failure: Audit records saved with missing or null SHA-256 hash' (BTB50-3), and 'Security Access Leak: Unauthorized audit records visible in search results' (BTB50-4). The 'IN PROGRESS' column contains two bugs: 'Validation Bypass: Invalid and malformed JSON logs accepted' (BTB50-2) and 'Compliance Violation: Tampered audit exports pass integrity verification' (BTB50-5). The 'IN REVIEW' column contains one bug: 'Performance Degradation: Log filtering across 10M records exceeds 1-second SLA' (BTB50-6). The 'DONE' column is empty. The board interface includes a search bar, version filter, quick filters, and a 'Group: Query' button.

2) Summary and description of a bug

The screenshot shows the Jira bug details page for 'PII Leak: Sensitive SSN and Credit Card numbers stored in cleartext' (BTB50-1). The page is divided into two main sections: 'Key details' on the left and 'Details' on the right. The 'Key details' section includes a description of the bug, expected and actual results, environment, subtasks, and linked work items. The 'Details' section includes a summary of the bug, assignee, reporter, labels, due date, start date, priority, and development information. The bug is currently assigned to 'Unassigned' and reported by 'Neha Sachin'. The priority is 'Medium'. The bug was created 9 minutes ago.

Key details

Description
Description: The system fails to parse incoming JSON logs properly and does not mask sensitive Personally Identifiable Information (PII) before writing records to the database.
Expected Result: PII (SSN, credit card numbers) is masked prior to storage.
Actual Result: Unmasked cleartext PII is persisted, violating FR-001 acceptance criteria.

Environment
None

Subtasks
Add subtask
